

National Weather Service Tallahassee, Florida

Significant Event Outlook

Heavy Rain and Flooding Possible Tuesday through Thursday

1. Event Summary and set up

A tropical airmass will move back into the region on Monday ahead of an approaching storm system.

As a series of mid level disturbances move across the region Tuesday through Thursday and interact with this tropical airmass, numerous showers and thunderstorms will develop.

Two distinct heavy rain events are expected. One on Tuesday and the other on Wednesday into Thursday.

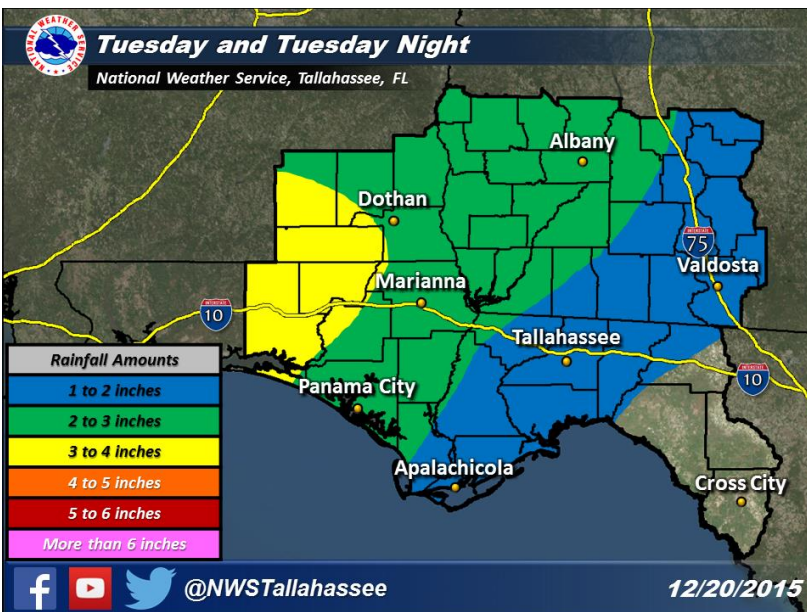

Storm total rainfall amounts:

Southeast Alabama/FL Panhandle: 4 – 7 inches

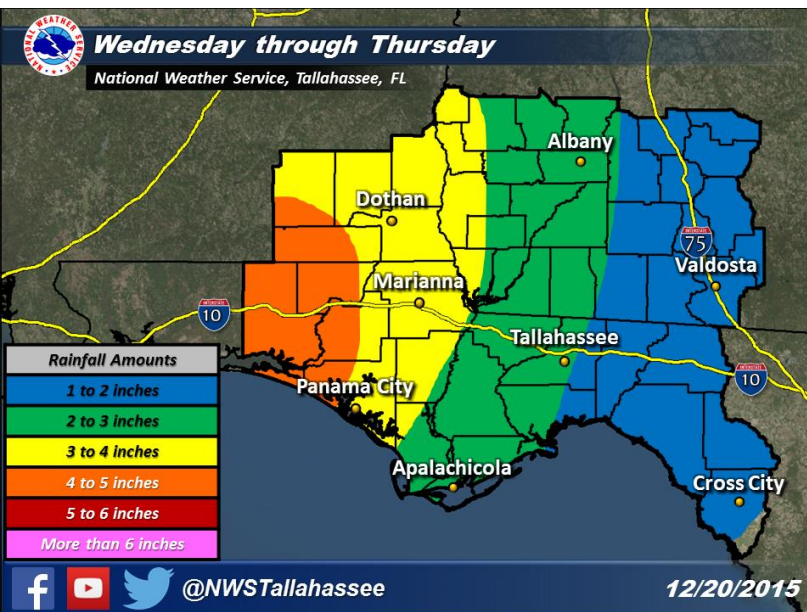

Southwestern Georgia: 3 – 5 inches

FL Big Bend and South Central GA: 2 – 4 inches

Event #1 – Tuesday

Event #2 – Wednesday and Thursday

2. Flood Impact Summary

River Flood Impacts:

Significant Flood Risk:

Pea and Choctawhatchee River Basins

Moderate River Flood Risk:

Apalachicola, Chattahoochee, Flint, Chipola River Basins

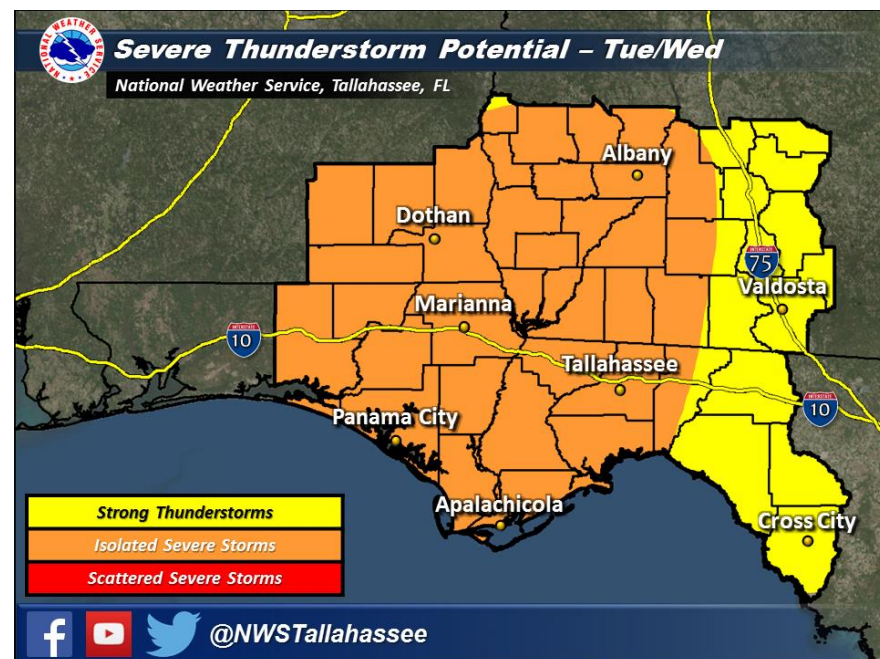

Elevated River Flood Risk:

Ochlockonee and Withlacoochee River Basins

In addition to the river flood risk, the two separate rainfall events will create the potential for flash flooding, especially during times of heavier rain in urban areas across Southeast Alabama and the Florida Panhandle.

3. Severe Thunderstorm Potential – Tuesday night and Wednesday

Some thunderstorms, especially Tuesday evening into Wednesday could become strong to severe. The greatest risk is across the western portions of the region.

Main Impact: Damaging winds.
